Questionnaire & Debate

Antilope

Questionnaire

# Two Questionnaires

Questionnaire 1 regarding the Summit as such

Questionnaire 2 about Antelope and Interoperability

- Essential for us
- If you intend to leave early in the afternoon, please complete during lunch break, as far as possible
- Now a time slot to complete it

# Questions 3 & 4

		Score
3	Quality assessed interoperable eHealth services are essential to realise expected added value and to increase their adoption.	
	<i>Comments and suggestions:</i>	

		Score
4	Recognised Quality Labelling and Certification organizations (certification bodies, conformance assessment bodies) and standards based quality assessed test procedures will increase reliability and acceptance of eHealth services nationally as well as across Europe.	
	<i>Comments and suggestions</i>	

# Questions 5 & 6

		Score
5	A European interoperability quality label and certification process is crucial to support the deployment of cross border eHealth services.	
	<i>Comments and suggestions:</i>	

		Score
6	Harmonizing existing quality label and certification processes in Europe need to include national and regional requirements.	
	<i>Comments and suggestions</i>	

# Questions 7 & 8

		Score
7	Comparable and trustworthy interoperability quality labelling and certification requires the use of quality assessed testing tools.	
	<i>Comments and suggestions:</i>	

		Score
8	The use of existing and the development of new tools to test interoperability based on standards and profiles should be promoted.	
	<i>Comments and suggestions</i>	

# Questions 9 & 10

		Score
9	A quality management system applied to the quality labelling and certification process will improve its trustworthiness and increase its adoption.	
	<i>Comments and suggestions:</i>	

		Score
10	The quality management system, based on related ISO standards, applies to the involved organisations, personnel and procedures.	
	<i>Comments and suggestions</i>	

# Questions 11 & 12

		Score
11	Use Cases are important building blocks in the realisation of interoperability.	
	<i>Comments and suggestions:</i>	

		Score
12	Use cases are largely similar across the continent, enabling reuse of functional descriptions.	
	<i>Comments and suggestions</i>	

# Questions 13 & 14

		Score
13	Use case realisation scenarios address implementation guidelines include national and regional specificities.	
	<i>Comments and suggestions:</i>	

		Score
14	When do you expect that your country will include <b>quality assessment</b> for eHealth products and services in their regulatory framework?	
	<i>Comments and suggestions</i>	

# Questions 15 & 16

		Score
15	When do you expect that your country will include <b>national interoperability</b> for eHealth systems and services in their regulatory framework?	
	<i>Comments and suggestions:</i>	

		Score
16	When do you expect that your country will include <b>European interoperability</b> for eHealth systems and services in their regulatory framework?	
	<i>Comments and suggestions</i>	

# Question 17

		Score
17	Do you have any suggestion, remark or proposal? Thank you for sharing this with the ANTILOPE partners.	
	<i>Comments and suggestions:</i>	

Debate

Some 'provocative statements'

# Some statements

1. We all want quality. Antilope is addressing interoperability. Quality is never granted for free and needs to be proven. Third party quality labelling and certification is the most objective way to do so.
2. Objective QL & C requires the use of quality assessed tools.
3. The QL & C process is subject to comply to standards too.
4. Implementing interoperability quality assessment should consider use case based approach.
5. Reaching interoperability will only be realised when addressing all stakeholders & all levels of interoperability. The hard way, the purely top/down seems not the work.
